

# HUB

## A Federated Content Management Web Client

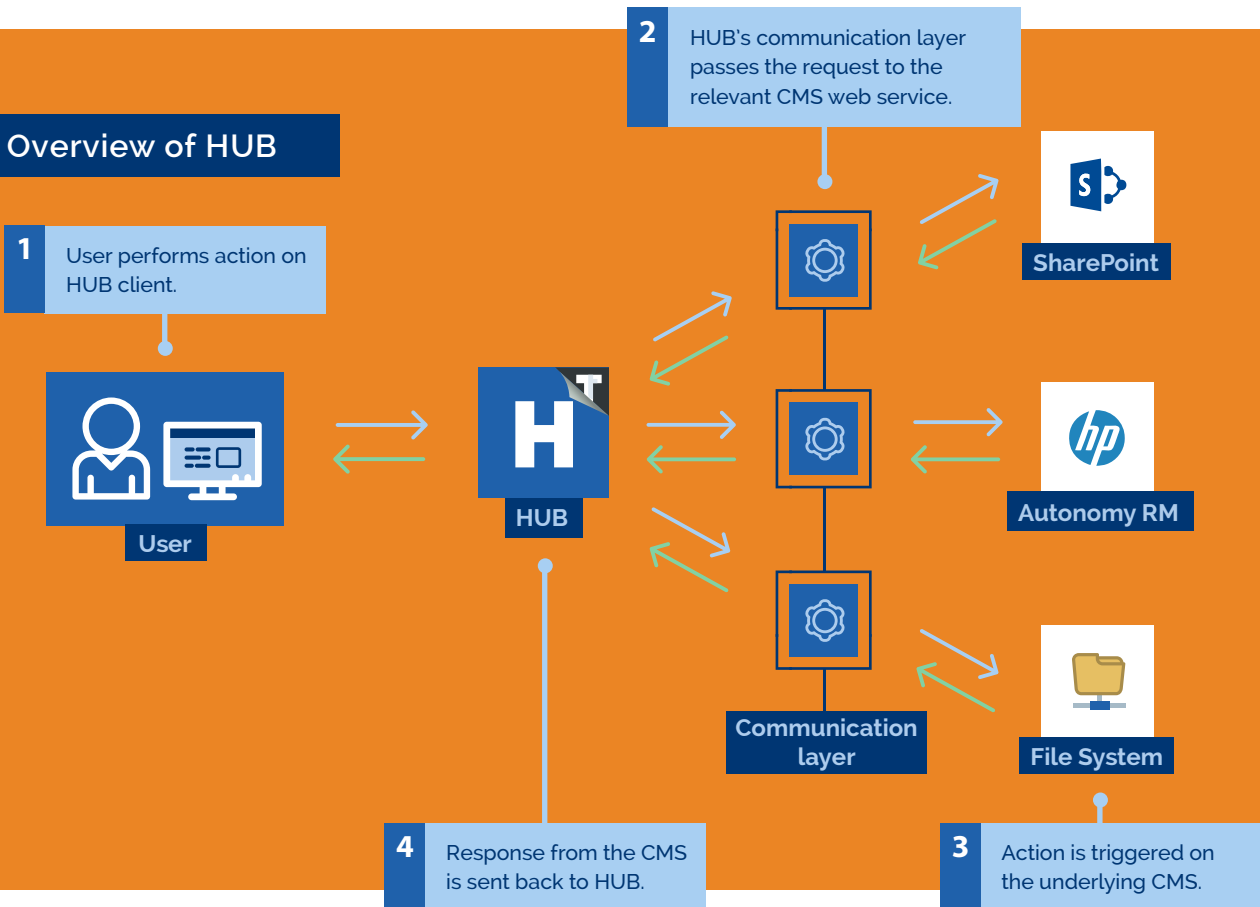

The screenshot displays the HUB web client interface. The top navigation bar includes the HUB logo and the word "HUB". Below the navigation bar, there are several menu items: "Search Options", "My Documents", "HUB DMS", "SharePoint DMS", "File System DMS", and "Pending Documents". The "HUB DMS" menu is expanded, showing a list of folders: Finance, Business, Marketing, HR, and Projects. A search bar labeled "Search containers..." is located below the folder list. On the right side of the interface, there is a section titled "CORRESPONDENCE" with "Add" and "Properties" buttons. Below this, a table lists correspondence items with checkboxes, icons, and names.

Traditional content management systems (CMS) can feel complex, overwhelming and often unable to meet business user's needs. Tullynore Technologies has developed a Client User Interface, designed to interact with a range of leading content management systems. Whether in the office, at a meeting or on the go, it is now simple to upload, access and manage content in records-enabled source repositories.

## Overview of HUB

HUB is deployed within your existing infrastructure and communicates securely with your current content management systems. HUB expands on existing solutions, enhancing user experience and functionality. By seamlessly integrating with both current and legacy systems, users can benefit from a single federated interface while allowing organizations to preserve their investment in existing content repositories and maintain compliance.

Smart phones and tablets are now an essential fixture in the enterprise. Tullynore's HUB is a flexible web-based solution, designed to truly mobilize the workforce and increase productivity, efficiency and mobility in all areas of the organization. HUB has been developed using the latest web technologies and has the advantage of delivering a simple and responsive user experience on any platform. In our experience a complex challenge when re-architecting existing content management systems.

## RM admin features

Provides an efficient centralized location to manage retention policies for all repositories in use.

Allows easy implementation of "manage in place" corporate compliance over network shares.

In an environment that includes multiple content management systems, Tullynore Technologies understands the importance of search and discovery. HUB offers powerful, customizable search capabilities that allow users to quickly retrieve relevant files from existing repositories. Our unique way of treating search as a session allows users to further refine searches based on current results without having to re-enter any metadata filters, this makes HUB ideal for sifting through millions of corporate documents.

## About Tullynore Technologies

We are market leaders in the provision of document management software and consultancy services. Our range of purpose-built software solutions empower organizations to achieve unparalleled value through enterprise content management and search, eDiscovery, archiving and compliance.

Additional information is available at <http://www.tullynore.com>

## Key features

A modular communication layer provides a simple way to connect with only the existing content management systems. This results in HUB being lightweight, fast and easy to deploy.

Users no longer need to download the physical content to find the file they need. With features such as quick preview, hit highlighting and advanced searching, this makes HUB a highly effective eDiscovery tool.

Cut, copy and paste multiple documents not only within the current document repository but across all supported platforms, removing the need for a full data migration when retiring legacy systems.

Configurable and customizable layout - users can control which fields to display in search results and record lists.

The ability to display, store and search on custom metadata tags. HUB can be used to incorporate additional fields, enriching the usability of the existing solution.

## Latest technology

Future-proof design, delivering high performance.

Responsive design supports virtually any device and screen size.

Documents can be sent as emails (access control procedures are always adhered to) to assist collaboration between team members.

With a built-in file plan search bar, users can quickly and easily locate folders within large corporate file plans.

Users can create file plan templates for specific departments. This allows rapid deployment while maintaining corporate standard structure.

Quick access reports deliver statistics from within a file plan for analysis of data and content.

Records or documents can be dragged and dropped within the system for productivity and ease of use.

Launch, edit and save any document back into its native repository without the need to checkout/check-in.

Metadata driven workflows and be implemented at both document and folder levels.
